PROFESSIONAL SUMMARY

- Full-Stack Software Engineer with 4+ years of experience specializing in high-performance web apps.
- Experience in leveraging AI tools to increase productivity.
- Proven track record of delivering end-to-end solutions for freelance clients, with a focus on database optimization and scalable API design.

TECHNICAL SKILLS

- Languages: Go (Golang), TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3
- Frameworks: React, Svelte, Next.js, SvelteKit, Node.js, Express.js, React Native
- Backend & Databases: RESTful APIs, MySQL, SQLite, PostgreSQL, OOP, SSL/Security
- Tools: Git, GitHub, Unit Testing, Agile Methodologies

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Freelance) | Upwork – Vancouver, WA | Jan 2020 – Present

- Architect and deploy full-stack web applications for a diverse client base, managing the complete SDLC from a rough draft to production.
- Develop high-performance backends in Go and [Node.js](#) or Bun, resulting in large reductions in server response times for data-heavy applications.

TECHNICAL PROJECTS

Infosections (Full-Stack Website 20K LOC) | [Github Link](#) | [Website](#)

- Designed a modular system using SvelteKit and Go to deliver sub-second page loads and optimized SEO performance.
- Designed the backend API in Go to manage dynamic content, prioritizing type safety and memory efficiency.

Window (NPM package) | [Github Link](#) | [Website](#)

- Developed a lightweight system utility in Go, leveraging low-level capabilities for efficient process and window management.
- Focused on high-concurrency patterns to ensure a minimal memory footprint while interacting with OS-level APIs.

LFC (Client Website) | [Github Link](#) | [Website](#)
